SET-UP GUIDE

To ensure your hot tub heats up in time, please follow the instructions below.

We will set up your hot tub and start the filling process for you, however due to the amount of time it takes to fill up the hot tub, we require all of our customers to fill up the tub with water and comply with the following instructions prior to use.

1. Continue to fill up the hot tub until it is just over the 'minimum fill' line and then remove the hose pipe. This should take between **1-2hrs** depending on your water pressure.
2. Press the  button to start the heating process. A red light will appear next to the  button and a green light will also appear next to the  button.
If no buttons are responsive, please make sure your pump display panel is unlocked by pressing the  button for 3 seconds.
3. Press the  or  buttons to set the desired temperature (*recommended 38°C, MAX 40-42°C*)
The display will flash and then return to show the current water temperature.
4. Place the **inflatable lid** on top of the water and attach the **hot tub cover** using the attached clips. This will ensure heat is not lost during the heating process.

5. Your hot tub will now take around **18-24hrs to heat up**. Check your hot tub regularly to ensure the temperature on the display is slowly increasing. It will generally increase between **1-1.5°C per hour** depending on the outside temperature.
6. When your hot tub has reached the desired temperature, press the  button to switch on the bubble jets, which will stay on for **30 minutes per session**.
7. The  button **must remain on for the entire duration of your hire** to maintain the water temperature.
8. It is recommended that you remove and **clean out the filter every night** after use to keep your hot tub clean and clear. We will also provide you with the necessary **chemicals** and **testing strips** to maintain the health of the water during the hire period. We will instruct you on the use of both of the above when we deliver your tub.
9. In the unlikely event that there is a problem with your hot tub, there is a troubleshooter guide in your information pack.

PLEASE DO NOT TURN OFF OR UNPLUG THE HOT TUB DURING THE ENTIRETY OF THE HIRE AS THE TUB WILL NOT REMAIN WARM WHILST UNPLUGGED.
